Istanbul, Tuzla, 34956, Turkey | *+90 5411205169*

Education

Sabanci University Oct 2022 - Jun 2026

B.Sc. *Computer Science and Engineering* | **GPA: 3.86/4** | rank: 23/402 in CS (Major), 28/654 in FENS (Faculty)

Relevant Coursework: Software Engineering, Mobile App Development, Computer Networks, Network Science, Data Analysis and Optimization, NLP, AI, LLMs, Deep learning, AI Ethics.

Work Experience

Fullstack Developer August 2026 - Present

KIM Vakfi *Istanbul, Turkey*

- Developed a panel that improved the foundation's visibility into its network, formalized managing it, and codified the knowledge.
- Ensured the accurate delivery of requirements while also maintaining simplicity and speed.

Forward Deployed Engineer Nov 2025 - Present

Freelance *Istanbul, Turkey*

- Designed and delivered multiple full-stack web applications for clients, including a high-traffic platform scaled to serve 10,000+ active global users.
- Engineered secure web systems using Next.js and Django, integrating advanced protection mechanisms, data anonymity protocols, and fine-grained role-based access control (RBAC).
- Managed end-to-end production infrastructure by configuring secure cloud object storage, deployment pipelines, implementing automated database backups, and ensuring high availability and data integrity.

Contract Fullstack Developer/ DevOps Engineer Nov 2025 - Jan 2026

Eastern Al-Maha Company (EMCO) *Kuwait, Kuwait (Remote)*

- Streamlined project scope by identifying and eliminating feature bloat, successfully realigning the development roadmap with core business requirements and accelerating delivery.
- Iterated on full-stack features, deploying critical frontend and backend updates driven by user feedback and telemetry data from a pilot program to improve application reliability.
- Hardened and optimized GCP infrastructure, migrating legacy storage assets to secure Google Cloud Storage buckets while enhancing overall deployment security while achieving 50% cost savings.

Backend Developer/ DevOps Engineer Intern Jun 2025 - Aug 2025

Eastern Al-Maha Company (EMCO) *Kuwait, Kuwait (Remote)*

- Orchestrated containerized applications utilizing Kubernetes and streamlined cloud deployments on GCP, establishing fundamental DevOps pipelines for the engineering environment.
- Engineered modular backend services and APIs, successfully coordinating the integration and merging of distributed services into a cohesive production system.
- Collaborated across frontend and backend teams to align data models and API endpoints, significantly reducing integration bottlenecks and ensuring seamless client-server communication.

Projects

Other projects visible on portfolio

RWRT: Turkish Language Adaptive Vocabulary Acquisition Apr 2026 - Jun 2026

- Engineered an adaptive NLP recommendation pipeline utilizing multilingual Bi-Encoders and a FAISS vector database to perform high-dimensional semantic search over Turkish language databases.
- Designed a custom multi-objective ranking algorithm using Maximum Marginal Relevance (MMR) and weighted features to solve complex data constraints.
- Developed an LLM-powered tutor interface utilizing the OpenRouter API for generative language coaching, backed by a simulated benchmarking framework evaluating 720 pipeline configurations to systematically optimize retrieval accuracy.

SemEval 2026: Task 9 - Multilingual Text Classification Nov 2025 - Jan 2026

- Participated in SemEval 2026 Arabic text classification: Polarization Detection
- Achieved P4 (Dev set) on binary classification using k-fold ensemble (10 models) with empirically tested preprocessing and MARBERT_v2
- Attained P5 (Dev set) on multiclass classification through MARBERT_v2 fine-tuning with snapshot ensembling and asymmetric loss optimization
- Evaluated morphological features and Arabic-native LLMs against our chosen approaches

AI Research Gap Finder Feb 2025 - Jan 2026

- Co-engineered a containerized microservices platform to automate systematic literature mapping, transitioning LLM tool-calling orchestration from LangChain abstractions to a cleaner Model Context Protocol (MCP) server architecture.
- Designed an agentic chat interface that guides researchers through conversational research-question refinement and uses MCP tools to generate keywords and Boolean query strings for academic search APIs.
- Architected a centralized, PostgreSQL-backed state tracking system with human-in-the-loop to facilitate a seamless, non-linear user experience; this enabled users to navigate freely backward and forward across project phases to change parameters and tune the approach without state loss and minimal re-computation.

Core Skills

Languages: Python, Javascript, Typescript, C++, Bash, Java, SQL, HTML & CSS, YAML, GO

Software Engineering: ExpressJS, NestJS, Next.js, SpringBoot, Django, FastAPI, React, React Native, Docker, Kubernetes, git, AWS, GCP, MySQL, PostgreSQL, MongoDB, Neo4J

Machine Learning & AI: Scikit-learn, matplotlib, Pytorch, transformers, sentence-transformers, BitsAndBytes, Huggingface, Langchain, Weaviate, Milvus, FAISS, Ollama, MCP, networkx, cuGRAPH

Soft Skills: Problem Solving, Organization & Planning, Time management, Communication, Presentation, Team Management, Scrum, Agile development

Languages

Arabic (Native), English (Fluent), Turkish (A2)

Certificates

Applications of AI for Predictive Maintenance Nvidia| Feb 2025

CCNA (Cisco Certified Network Associate) New Horizons Computer Learning Centers | Apr 2022

Certified Ethical Hacker New Horizons Computer Learning Centers | Mar 2022

CompTia Security+ New Horizons Computer Learning Centers | Jan 2022

CompTia Network+ New Horizons Computer Learning Centers | Oct 2021
